## PROFESSIONAL SUMMARY

Data Engineer with ~2 years of experience building production ETL/ELT pipelines on Snowflake, PySpark, SQL, and Dataiku for a leading U.S. pharmaceutical client at ZS Associates. Skilled in data modeling, data warehousing, data quality automation on AWS, and medallion lakehouse architecture with Delta Lake, slowly changing dimensions, and Apache Airflow on Databricks. Selected for Google's Patchamomma 2026 cohort, ranking 58th of 3,500 women in tech globally (top ~2%) for a banking data platform built with Google Cloud Platform, BigQuery, and Google ADK AI agents. Confluent Certified Data Streaming Engineer (Apache Kafka and Flink).

## PROFESSIONAL EXPERIENCE

**Business Technology Solutions Associate - ETL Developer | ZS Associates** Pune, Maharashtra, India | 10/2024 – 06/2026

- Built and maintained ETL/ELT pipelines in PySpark, Snowflake SQL, and Dataiku, processing order-level sales, customer, and event-related tables of up to 30M+ rows from 5+ systems (SAP HANA, Salesforce, Veeva, Cvent, Okta), cutting batch processing time by **35%**.
- Reduced dashboard refresh time by **54%** (from ~2h10m to ~1h) by implementing a status-based incremental refresh, updating active promotions daily and completed promotions weekly.
- Improved reporting efficiency by **30%** and accuracy across 30+ business-critical KPIs by building automated KPI data models joining order, rebate, gift card, coupon, and loyalty-points fact tables with account, product, and event dimensions, validated through SIT/UAT testing.
- Reduced insight-generation time by **40%** for 50+ users by optimizing pipelines behind a Dataiku self-service app and Power BI dashboards.
- Enabled a **15–20%** improvement in campaign ROI through promotional-effectiveness and trend analyses on commercial data, using Snowflake SQL and Time Travel to compare historical data states.
- Cut time lost to promotion-configuration errors by **30%** by replacing multi-combination manual entry with comma-separated UI input and adding automated checks for missing critical fields with proactive email alerts.
- Served as the primary point of contact for promotion analytics, leading daily and weekly client stakeholder meetings to present progress and gather requirements, coordinating analytics, reporting, and dashboard teams, and owning business context for promotion onboarding, KPIs, and dashboard logic.
- Onboarded and trained **2** team members on promotion business logic and the Dataiku app's onboarding workflow, including a full knowledge transfer during role transition.
- **Data Quality Management (DQM) Automation:** Built an automated data quality validation framework for **18** supply-chain datasets using Python and SQL on AWS Lambda, Amazon S3, and Microsoft SQL Server, covering null, duplicate, schema, and data type checks with alerting and remediation.

## PERSONAL PROJECTS

**End-to-End Banking Data Platform | Google Patchamomma 2026**

- Built a banking data platform on Databricks and Snowflake with a Bronze, Silver, and Gold medallion architecture, Delta Lake on Azure Data Lake Storage, incremental ingestion, and SCD Type 2 across 16 source tables in 5 domains (customer, account, transaction, loan, and risk).
- Orchestrated pipelines in Apache Airflow with Databricks data quality checks and audit tables tracking run status, row counts, and file metadata, using Git for version control with incremental deployment as each stage was completed.
- Exposed the Gold layer to an LLM query agent (Google ADK) for natural language querying, with role-based access controls enforcing separate data visibility rules for customer- and employee-facing queries, and intuitive dashboards via Data Studio (Looker Studio) to support data-driven banking insights. Deployed as a full-stack application with a React frontend (Firebase Hosting) and backend on Google Cloud Run.

**Prediction Model for Analysis of Hepatitis Dataset for Diagnostic Accuracy | R Programming, Excel, Machine Learning**

- Analyzed health details of 156 patients; imputed missing data in the dataset by applying statistical methods using the mice package in R.
- Ranked 19 variables based on importance in Hepatitis diagnosis for better accuracy in diagnostic prediction using the Random Forest Model.

## SKILLS

**Languages & Libraries:** Python, SQL, PySpark, R, Pandas, NumPy
**Data Platforms:** Snowflake, Snowflake Time Travel, Databricks, Apache Spark, Delta Lake, Microsoft SQL Server, Google BigQuery
**Cloud:** Amazon Web Services, Amazon S3, AWS Lambda, Microsoft Azure, Azure Data Lake Storage, Google Cloud Platform
**AI & Agents:** Google ADK, Claude Code, Microsoft Copilot, ChatGPT Enterprise
**Orchestration & Streaming:** Apache Airflow, Dataiku, Apache Kafka, Apache Flink
**Version Control & Project Management:** Git, JIRA
**BI & Visualization:** Microsoft Power BI, Tableau, Looker Studio
**Concepts:** ETL, ELT, Data Modeling, Dimensional Modeling, Data Warehousing, Medallion Architecture, Slowly Changing Dimensions, Data Quality, Query Optimization, Workflow Automation, Stakeholder Management

## CERTIFICATIONS

Confluent Certified Data Streaming Engineer | Certified ThoughtSpot Professional | Google Patchamomma 2026 Certificates | Dataiku Core Designer Certification | Dataiku Advanced Designer Certification | McKinsey Forward Program (In Progress)

## ACHIEVEMENTS

- Ranked **58th out of 3,500** women in tech globally (top ~2%) in **Google's Patchamomma 2026** cohort, building AI-powered solutions using tools from Google Cloud Platform (GCP) under structured mentorship.

## EDUCATION

**Motilal Nehru National Institute of Technology** Prayagraj, Uttar Pradesh, India | 2020 – 2024
B.Tech (Bachelor of Technology) in Biotechnology
**CPI: 9.04/10**

## LANGUAGES

**English** - Fluent **German** - Elementary **Kannada** - Fluent **Hindi** - Fluent
