

PROFESSIONAL EXPERIENCE

Business Technology Solutions Associate - ETL Developer | ZS Associates

Pune, Maharashtra, India | 10/2024 – 06/2026

Scalable ETL, Analytics & Reporting on Brand Promotions

- Engineered **scalable ETL pipelines** using **SQL, PySpark, Python, Snowflake**, and **Dataiku DSS** to ingest, transform, and integrate data from 5+ sources across multiple systems (**SAP HANA, Salesforce, Cvent, Veeva, Okta**), leveraging Generative AI tools (**ChatGPT Enterprise, Microsoft Copilot, Claude Code**) to fast-track development, improving data quality by 25% and reducing processing time by 35%.
- Developed **automated KPI frameworks** and **reporting datasets**, validated through **SIT/UAT testing**, improving reporting efficiency by **30%** and accuracy across **30+ critical business metrics** for a leading U.S. pharmaceutical client - leading cross-functional requirements gathering across client, analytics, reporting, and frontend dashboard teams to ensure accurate development and testing for promotional analysis and dashboard delivery.
- Conducted promotional effectiveness and trend analyses on large-scale commercial datasets, delivering insights that contributed to a **15–20%** improvement in **campaign ROI**.
- Enhanced **backend data pipelines** powering a **Dataiku-hosted self-service analytics application** with **real-time Power BI dashboards**, reducing insight-generation time by **40%** and empowering **50+** business stakeholders to self-serve reporting.
- Reduced dashboard refresh time by **70 minutes** (a **~54%** reduction, from 2.15 hours to ~1 hour) through backend optimization, and cut time lost to promotion-configuration errors by **30%** by improving configuration validation through updated data processing and proactive email notifications.

Data Quality Management (DQM) Automation

- Designed and deployed an **automated Data Quality Management (DQM) framework** validating **18** supply chain datasets for a leading U.S. pharmaceutical company using **MS SQL Server, AWS S3, AWS Lambda, SQL**, and **Python** — implementing **NULL, duplicate, schema, and data-type checks** with automated alerting and remediation workflows that improved data integrity and accelerated downstream analytics.

PERSONAL PROJECTS

End-to-End Banking Data Platform | Data Engineering and Analytics  , Under Google Patchamomma 2026; Ranked 58th of 3,500 submissions (top ~2%) | PySpark, SQL, Airflow, Snowflake, Delta Lake (ADLS Gen2), Azure Databricks, BigQuery, Data Studio, Google ADK, Google Cloud Run, Firebase, ReactJS, Git

- Engineered an **end-to-end banking data platform** on **Azure Databricks** and **Snowflake**, implementing a **Bronze–Silver–Gold Medallion architecture**, incremental ingestion, SCD Type 1/2 data processing, and **Delta Lake storage** on Azure Data Lake Storage (**ADLS Gen2**) across customer, account, transaction, loan, and risk domains.
- Automated pipeline orchestration via **Airflow** and data quality validation via **Databricks**, covering **16** source tables across multiple domains, with **audit tables** tracking **run status, row counts**, and **file-level metadata** for every pipeline execution, using **Git** for version control with incremental deployment as each stage was completed.
- Integrated a **Google ADK-based AI chatbot** for **natural-language querying**, with **role-based access controls** enforcing separate data-visibility rules for customer- and employee-facing queries, and intuitive dashboards via **Data Studio (Looker Studio)** to support data-driven banking insights, and deployed it as a **full-stack application** with a **React** frontend (**Firebase Hosting**) and backend on **Google Cloud Run**. 

Prediction Model for Analysis of Hepatitis Dataset for Diagnostic Accuracy | R Programming, Excel, Machine Learning 

- Analyzed health details of **156** patients; consolidated missing data in the dataset by applying statistical methods through the **mice** package in **R**.
- Arranged **19 variables** based on importance in Hepatitis diagnosis for better accuracy in diagnostic prediction using the **Random Forest Model**.

SKILLS

Data Engineering & Cloud Technologies: Snowflake, Microsoft SQL Server, Dataiku DSS, Airflow, Delta Lake storage (ADLS Gen2), Azure Databricks, Microsoft Power BI, Tableau, Google Cloud Platform (GCP), Google ADK, Google BigQuery, Data Studio (Looker Studio), Microsoft Excel, AWS S3, AWS Lambda, Apache Kafka, Apache Flink, JIRA, Git

Programming and Query Languages: Python, SQL, PySpark, R Programming, Jupyter Notebook, Anaconda, RStudio

Libraries: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, dplyr, tidyverse, ggplot2, randomForest, mice, Amelia

Business Skills: Client and Stakeholder Management, Business Requirements Gathering, Data-Driven Decision Making, Problem Solving and Root Cause Analysis, Project Coordination and Cross-Functional Collaboration, Presentation Skills, Business Communication

Data Analytics & Machine Learning: Exploratory Data Analysis (EDA), ETL/ELT Pipeline Development, Data Integration and Data Migration, Data Warehousing, Data Modeling, Query Performance Optimization, Workflow Automation, Interactive Dashboards, Storytelling, Statistical Analysis & Hypothesis Testing, Data Cleaning, Predictive Modeling and Machine Learning Fundamentals, KPI Development, Data Validation and Quality Assurance

CERTIFICATIONS

Confluent Certified Data Streaming Engineer  | Certified ThoughtSpot Professional  | Google Patchamomma 2026 Certificates 

Dataiku Core Designer Certification  | Dataiku Advanced Designer Certification 

ACHIEVEMENTS

Google Patchamomma 2026 - Cohort Member, Ranked 58th of 3,500 (Top ~2%) 

- Ranked **58th** out of **3,500** women in tech globally (**top ~2%**) in Google's Patchamomma 2026 cohort, building **AI-powered solutions** using tools from **Google Cloud Platform (GCP)** under structured mentorship.

EDUCATION

Motilal Nehru National Institute of Technology, Prayagraj, UP, India 

B.Tech (Bachelor of Technology) : Biotechnology

CPI: 9.04/10

2020 – 2024

LANGUAGES

English

German

Kannada
